Objective

Aspiring computer science professional with a strong foundation in programming and a growing passion for artificial intelligence, machine learning, and data science. Dedicated to leveraging analytical and technical skills to build innovative, data-driven solutions. Focused on contributing to challenging projects, expanding domain expertise, and driving meaningful advancements in AI and intelligent decision-making systems.

Education

CHANDIGARH UNIVERSITY

Bachelor of Engineering

Aug 2023 - June 2027

Mohali, Punjab

ASIAN INTERNATIONAL SCHOOL

Intermediate (CBSE)

APR 2021 - Mar 2023

Howrah, West Bengal

ST. HELEN'S SCHOOL

Matriculation (ICSE)

APR 2009 - Mar 2021

Howrah, West Bengal

Technical Skills

Languages: Python, C/C++, SAS, SQL, HTML, CSS, JavaScript, Node Js.

Technical Competencies: Data Science, Machine Learning, MS Office Suite, Power Bi.

Developer Tools: VS Code, Google Colab, Pycharm, Replit.

Technologies/Frameworks: Data Structure, DBMS, GitHub.

Experience

Drivado Transfers Pvt Ltd (Internship)

May 2025 - July 2025

- Assist in data collection, preprocessing, and analysis
- Develop and implement machine learning models
- Collaborate with the team on real-world data-driven projects
- Present insights and findings with clarity
- Maintain documentation of code and experiments

Projects

Demand Insight Dashboard for Car Chauffeur Service | *Power BI, Python, Machine Learning*

June 2025

- Phase 1 – Power BI Analysis: Built an interactive dashboard to show booking demand trends. Cleaned raw vehicle, driver, and passenger data (null handling, location mapping) and created visuals like heatmaps and time/location-based demand charts.
- Phase 2 – Python ML Modeling: Created features (price–distance, country trends) and trained Random Forest and XGBoost models to predict ride prices. Used label encoding, feature selection, and evaluated models with MAE and R² for better accuracy.

Skin Disease Prediction Model Using CNN | *Python, Machine Learning, SQL, Data Science*

June 2024

- Built an AI-based skin disease prediction model using CNNs to classify multiple skin conditions from medical images.
- Prepared and labeled the dataset, trained and evaluated the model using accuracy, precision, and recall, and performed visual analysis of predictions for better interpretability.

Certificates

- **Data Science and Analytics** – Coding Ninjas
- **Smart India Hackathon (SIH)** – Finalist
- **The Ultimate Job Ready Data Science Course**- Code With Harry
- **Remote Sensing & GIS for Environmental Studies** – ISRO (IIRS)
- **University Project Expo (Phase-1 & Phase-2) Certificate** – E-Library Project
